

SAURAV KUMAR

Software Engineer — DevOps Engineer — Cloud & Distributed Systems

Ranchi, Jharkhand | +91 8409636071 | saurav840963@gmail.com | sauravin.netlify.app

[LinkedIn](#) | [GitHub](#) | [LeetCode](#) (1100+ Problems Solved)

PROFESSIONAL PROFILE

Software Engineer and DevOps Engineer with industry internship experience in software development, cloud infrastructure, and DevOps engineering. Strong foundation in Data Structures & Algorithms and Object-Oriented Programming, with 1100+ LeetCode problems solved. Experienced in backend development, microservices, containerization, CI/CD, cloud infrastructure, and GitOps using AWS, Docker, Kubernetes, OpenShift, GitHub Actions, ArgoCD, and Terraform. Familiar with Linux, networking, Infrastructure as Code, monitoring and observability, system design, LLD, and production engineering. Passionate about building scalable, reliable, and automated systems.

EDUCATION

Sarala Birla University

Bachelor of Technology (B.Tech) in Computer Science & Engineering
CGPA: 7.75/10

Ranchi
2023 – 2027

S.S. Memorial College

Intermediate (Science) – Percentage: 73.4%

Ranchi
2021 – 2023

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, C++

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), LLD, System Design, DBMS, Operating Systems, Computer Networks

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Microservices

Databases: MongoDB, Redis, SQL

Cloud: AWS (EC2, S3, IAM, VPC, CloudWatch)

Containers & Orchestration: Docker, Kubernetes, OpenShift, Deployments, Services, ConfigMaps, Secrets, Ingress, Routes, HPA, Liveness/Readiness Probes

CI/CD & GitOps: Git, GitHub Actions, Jenkins, ArgoCD, GitOps

Infrastructure as Code: Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana

Security & DevSecOps: Trivy, Container Security, Security Scanning

Linux & Networking: Linux (Ubuntu), Bash/Shell Scripting, TCP/IP, DNS, HTTP/HTTPS, SSH, Nginx

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS

Tools: VS Code, Postman, GitHub

EXPERIENCE

Davine Technologies

Information Technology — Remote

DevOps Intern
Jul 2026 – Present

- Contributed to DevOps projects by supporting infrastructure, deployment workflows, and operational activities.
- Streamlined deployment processes and maintained technical documentation in collaboration with engineering teams.
- Applied DevOps practices across cloud infrastructure, containerization, CI/CD, Linux, and deployment workflows.

Trionexindia

Software Engineering — Cloud & DevOps

Software Engineer (Intern)
Aug 2025 – Jan 2026

- Developed and maintained full-stack web applications using the MERN stack.
- Configured and deployed applications on AWS EC2 with Amazon S3 for static asset delivery.
- Automated application build and deployment workflows using GitHub Actions and Docker.

ACADEMIC PROJECTS

AI-Driven Self-Healing DevOps Pipeline | *Kubernetes, Jenkins, ArgoCD, Ansible, Prometheus* Cloud-Native Automation

- Engineered a closed-loop self-healing DevOps platform on Kubernetes that detects failures using pod health, CPU, restart counts, HPA status, and HTTP 5xx metrics and selects automated remediation actions.
- Implemented incident severity scoring and progressive remediation, escalating from pod restart to **Ansible recovery and GitOps rollback** when initial recovery attempts fail.
- Automated CI/CD using **Jenkins, Docker, Trivy, GitHub, and ArgoCD**, covering testing, security auditing, container scanning, image publishing, and GitOps-based Kubernetes deployment.
- Validated end-to-end recovery through controlled **CrashLoopBackOff failure injection**, achieving **3/3 healthy replicas, 0 unavailable replicas, and 0 restarts** after automated GitOps rollback.

End-to-End Microservices Platform | *Cloud & DevOps*

- Designed a domain-driven microservices architecture on Kubernetes, using Nginx Ingress for traffic routing and service discovery.
- Implemented a GitOps deployment workflow with ArgoCD, enabling automated deployments and rapid rollbacks to stable versions.
- Optimized container images using multi-stage Dockerfiles, reducing image size by 40% and deployment cycles by 60% through GitHub Actions.
- Configured Horizontal Pod Autoscalers (HPA) and resource quotas to improve availability and cluster resource utilization during peak traffic.

ApkaKitchen - Food Ordering Platform | *Full-Stack Project*

- Developed a comprehensive food delivery platform with role-based authentication and secure REST APIs.
- Designed the Node.js backend and deployed the application on AWS Linux instances, managing the application lifecycle from development to deployment.

ACHIEVEMENTS

- Solved **1100+ Data Structures and Algorithms problems** on **LeetCode**, demonstrating strong problem-solving, algorithmic thinking, and proficiency in data structures.
- **3rd Place:** Coden Clone Coding Competition (2024) – Solved complex algorithmic challenges under time constraints.
- **Adobe Hackathon:** Participated in the Adobe Hackathon and advanced to the **3rd Round**, demonstrating strong problem-solving and software development skills.

LANGUAGES

English (Fluent), Hindi (Native).
